

Hand-Molded Motorcycle Headlight Protector Fitting Guide

Thank you for purchasing your ROK Stopper motorcycle headlight protector.

ROK Stopper (formerly formerly AMHP) have been designing, manufacturing and selling premium motorcycle headlight protectors for

over 20 years, proudly producing the largest range of headlight protectors worldwide.

Each of our Premium Hand Molded Motorcycle Headlight Protector Kits comes with a 1-year Manufacturer's Warranty.

Installation

ROK Stopper produces hundreds of different shaped headlight protectors designed to fit a multitude of makes and models.

ROK Stopper headlight guards use 3M™ Dual Locks which allow the cover to be affixed to the headlight lens without any drilling or addition brackets. The cover can also be easily removed for cleaning.

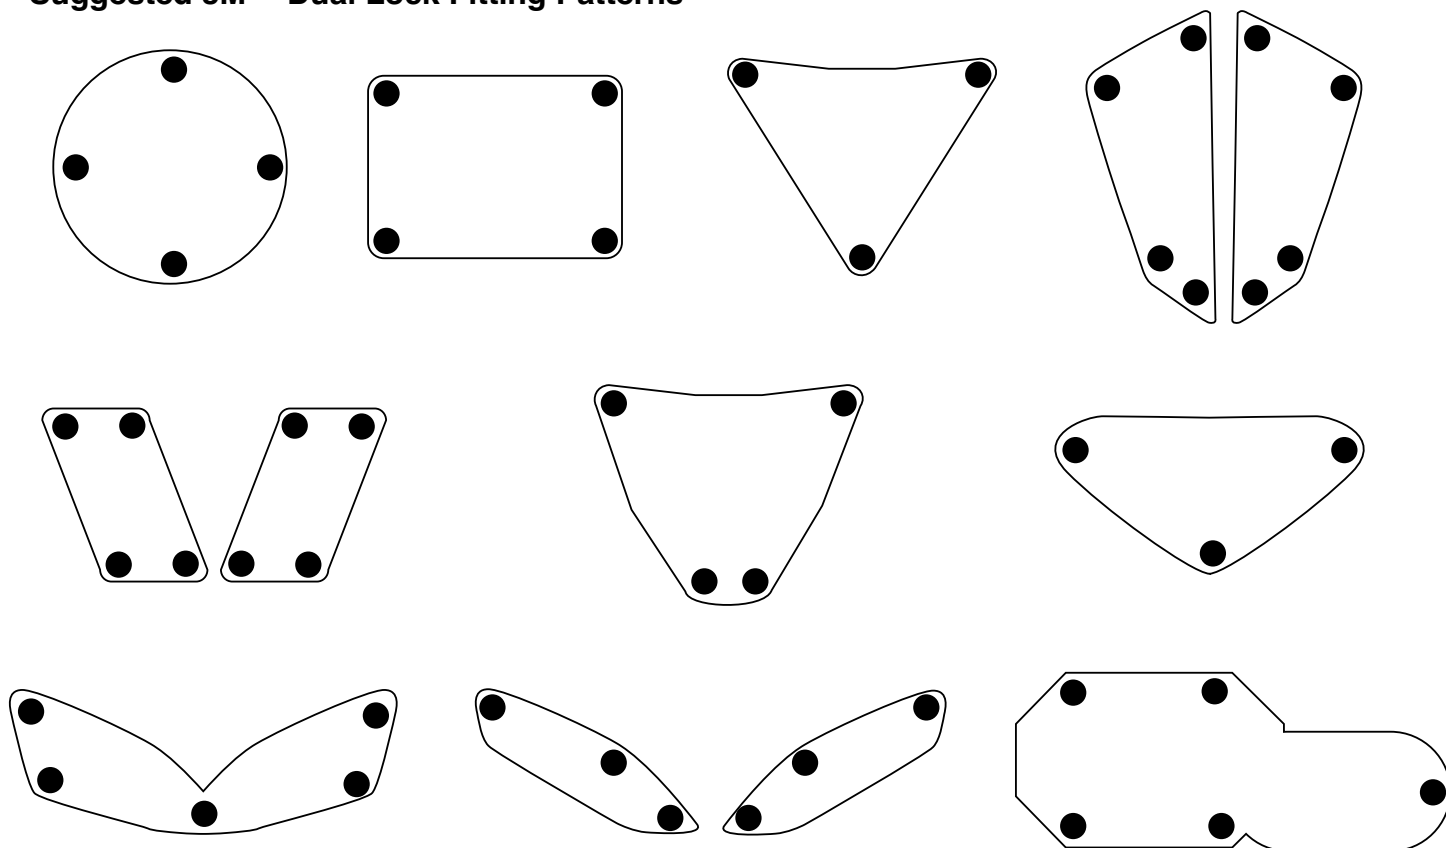

Road bike lenses subjected to higher speeds

may require extra Dual Locks which will be supplied with your kit.

Ensure that the Dual Locks are equally distributed and affixed at the corners of the lense where possible and affixed within the edges of the headlight protector.

Please see below suggested positioning of the Dual Lock fasteners as a guide. If you are still unsure please contact Adventuremoto.com.au.

Suggested 3M™ Dual Lock Fitting Patterns

Please read the ROK Stopper Fitting Guide enclosed with your headlight guard kit which outlines surface preparation before attempting to fit your ROK Stopper guard to your headlight.
